

SGC40100_01_GF_22FDSOI

CHARGE PUMP WITH ULP LUDICROUS MODE

Features

- Fast response Charge Pump
- Output current up to 100mA
- Ludicrous Low Power Mode
- Low quiescent
- Low ripple
- Power good comparator and flag
- Soft start and over-current protection
- Programmable output range, from 0.56V to 0.90V
- Large input voltage range, from 1.80V to 5.50V

General Description

SGC40100_01_GF_22FDSOI is a fast response Charge Pump (CP) buck regulator. Making use of advanced control techniques, it offers soft start-up, instantaneous over-current protection, ultra-fast load transient response and low ripple. Additionally, it provides an innovative Ludicrous Ultra Low Power Mode that guarantees a reduction to virtually "0" quiescent. Designed for SoC integration, the regulator operates with just one 1 μ F flying capacitor, without requiring any output coils. Additionally, it is stable with any type of output capacitor. Designed to achieve 4% overall accuracy (over Load / Line / Temp), it is specified from TJ = -40°C to +125°C.

Applications

- Portable applications
- IoT

Quick Reference

SYMBOL	DESCRIPTION	MIN	TYP	MAX	UNIT
V _{IN}	Input Sup.	1.80	-	5.50	V
V _{DVDD}	Digital Sup.	0.50	-	1.20	V
V _O	Normal V _{OUT}	0.56	0.80	0.90	V
V _O	ULP V _{OUT}	0.50	-	0.90	V
I _O	Out Current	0	-	100	mA
